Tll STEG

Q1: Evil Terms Of Service

Question: EvilCorp's Terms of Service says you give up all rights by scrolling to the bottom. Read it carefully. Someone left something in this document that a normal reader would never see. What is it?

Answer: `CAT{but_i_refuse}`

Solution: The flag is white text on a white page at the very end. Select all (Ctrl+A) and change the font colour to a dark one.

Q2: Evil Mug

Question: EvilCorp hands out branded mugs to new recruits. This photo of one looks harmless, but the file itself carries a note. What does the note say?

Answer: `CAT{detailed_search}`

Solution: It's in the image metadata (EXIF "Comments"). Windows: right-click → Properties → Details. Online: exif.tools.

Q3: BLACKBOOK

Question: The trail from the terms and the mug leads to an insider's "black book", which looks like a blank black rectangle. Make the invisible visible. What is written in it?

Answer: `CAT{l1ghtw0rks}`

Solution: The text is black on near-black. Raise the brightness in Photopea or any image editor (Image → Adjustments → Brightness/Contrast or Levels).

Q4: Gimmick Boss

Question: The black book names the insider's boss, and this photo is the boss. The photo's metadata holds a note from the insider, and the image itself hides a file. Recover the hidden

message. It ends with a final encoded line. Decode it to get the flag.

Answer: `CAT{whysoserious}`

Solution: The metadata comment says `password:lifeisajoke`. Use it with steghide to extract the hidden file. The file ends with binary, which decodes from 8-bit ASCII to the flag.

Q5: EvilChair

Question: The insider photographed the boss's chair before leaving. A JPEG viewer shows only the chair, but the file holds more than the picture. What is appended to the end of it?

Answer: `CAT{saveaseat}`

Solution: Run `strings` on the file, or open it in a hex viewer, and look at the very end.

Q6: EvilCorp memory wipe

Question: The insider also recorded EvilCorp's "memory wipe" broadcast. The file warns of a high-frequency component. Don't listen to it, look at it. What does the audio spell out?

Answer: `cat{waverunner}`

Solution: Open the file in a spectrogram viewer. The text is drawn between roughly 5 and 15 kHz. It's lowercase in the audio.

Q7: tryfindme

Question: This last photo's comment says the password isn't in the metadata and tells you to play with the image. Find the password hidden in the picture, use it to unlock the embedded file, then decode the final line to get the flag.

Answer: `CAT{youfoundme!}`

Solution: Adjust brightness/levels until a faint `0004` appears below the silhouettes. Use it as the steghide password. The extracted file contains a Base64 string (`Q0FUe3lvdWZvdW5kbWUhfQ==`), which decodes to the flag.
